

Certificate of conformity

In a validation audit, the organisation

Climatiq Technologies GmbH

has developed a compliant calculation methodology of product-related greenhouse gas balances (product carbon footprint) for the areas

Electricity, Air travel, Scope 3.1 calculations, Logistics and Cloud Computing

on the basis of the presented data as of 28.09.2023 developed according to the requirements of the standards:

DIN EN ISO 14067

February 2019 issue

GHG Protocol - Product Life Cycle Accounting & Reporting Standard

Issue September 2011

The validation was carried out in accordance with the requirements of ISO 14064-3:2020-05.

The balancing tool fulfils all requirements for the balancing system and the determination of greenhouse gas-relevant information for the determination of emissions in the above-mentioned areas according to the cradle-to-gate accounting approach according to the above-mentioned standards. The determination methodology includes the following life cycle stages:

Raw material extraction, pre-production, upstream transport, production

The emission factors used for the calculation were taken from published information or credible sources. The survey methodology was checked for suitability and plausibility.

The determination of the specific product carbon footprints and the correct application of the determination methodology is the responsibility of the organisation mentioned above.

The basis of the certificate is the test report with the number C-23-25161.
